

# Trade Reconstruction

Automatically reconstruct trade records and communication data in minutes, giving you a complete picture of your trading activity.

## Why you need it?

Regulators are increasingly looking for not only pre- and post-trade transparency, but greater oversight of your trade and communication data. Our Trade Reconstruction platform helps you effectively manage your financial and non-financial risks across your business with complete visibility of all the necessary information relating to a trade. This allows you to spend less time listening to audio and more time on proactive supervision and controls.

**RECONSTRUCT**

### It's efficient

Our technology allows you take a proactive approach to best practise, pull reports quicker, and react to regulator requests at the click of a button.

### It's universal

Our solution operates in tens of sites worldwide as a centrally managed system. It also supports more than 20 languages for companies with multilingual employees.

### It's scalable

The platform is data agnostic and can be adapted to suit any size of business, starting in one department and moving to more.

## What you'll love about it.

Reconstructing a trade requires a lot of data to be processed from various channels, which is time consuming and error-prone when done manually. **Our platform reduces the amount of time needed to reconstruct trades as it processes and filters this data in minutes, rather than days or weeks.**

You'll also gain actionable insights around a particular trade allowing you to optimise trading activity and lower operational risks.

### Reduce manual data processing

The system uses advanced data classifying to radically reduce the necessary trade and communication data by 95% saving you valuable time, money and resources.

### See the full picture

It allows you to identify important trading behaviour and patterns by having the full context around a trade, all in chronological order.

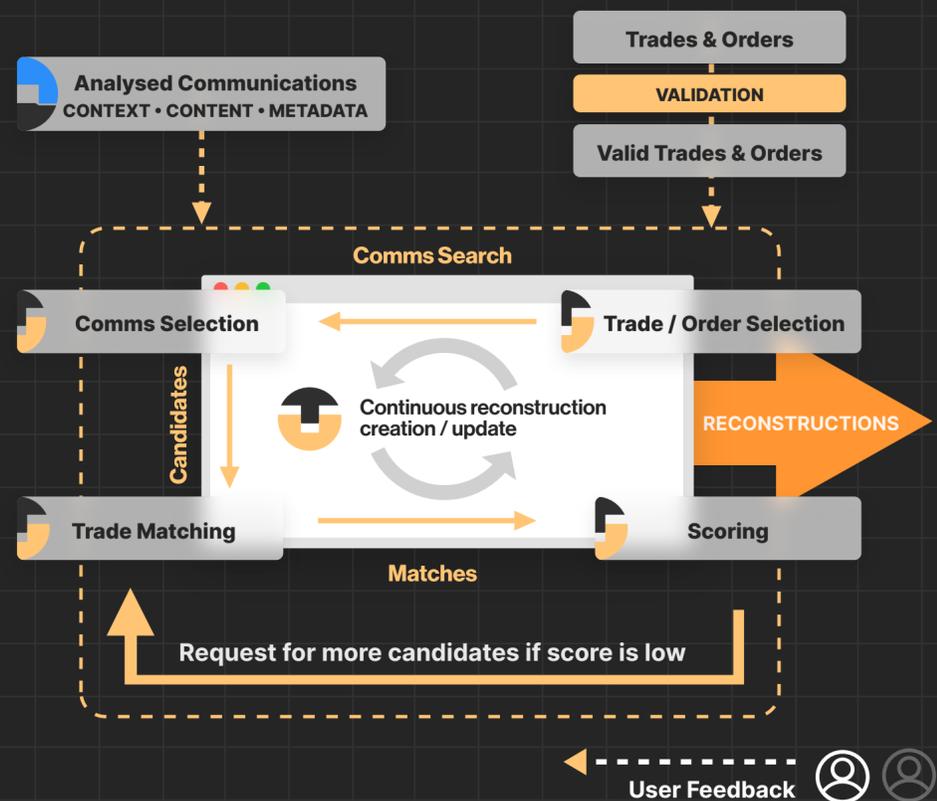

### Improve customer relations

Use our technology to provide insight into trade disputes, customer litigations and helps you swiftly check if your brokers are giving suitable and appropriate advice.

## How it works.

The VoxSmart Trade Reconstruction platform aggregates both structured and unstructured data sources including voice, eComms, chats and HR data and automatically links them to related trade and other information. This gives you a complete picture of the trade lifecycle, helping you investigate pre- and post-trade to accurately detect evidence of market abuse or misconduct. Our technology can be tested and audited for complete compliance transparency.

Match accuracy is enhanced when powered by VoxSmart Communications Surveillance as effective trade reconstructions always need accurate communications analysis.

### Huge volumes

Our technology can filter millions of communications per day in near real time and scale to businesses large and small.

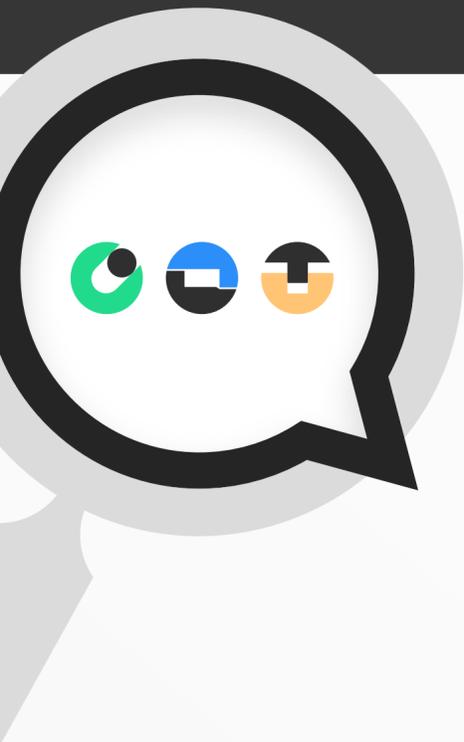

### It's cloud ready

All the top cloud providers are supported and can be deployed either fully on-cloud or hybrid with analysis on the cloud and data residing on premise.

### It's always on

The technology automatically links trades to their corresponding communications as soon as they are available in the system.

## The smarter way to supervise your communications.
